**WE EXIST TO
EMPOWER YOUR MISSION**

WHO ARE WE ?

As a DEXXDEF , we are passionately committed to providing leading-edge solutions and equipment that enhance the overall agility and survivability of the modern warfighter and tactical operator.

We design, develop and deliver protective plates and head systems, as well as innovative products and management solutions for military and tactical operators worldwide.

We invest in the development of advanced concept, integrated systems that will be critical to meet the challenges of tomorrow and beyond.

We believe in human-centered innovation, and work proactively with our end-users to identify and solve the problems left unsolved by others. All products including body protective plates, ballistic helmets, shields, are manufactured under strict ISO 9001:2015 certification.

**UNDERWEAR
BALLISTIC VEST**

Underwear Ballistic Vest Line

Comfortable underwear with elastic side bands

Lightweight

CAS Trauma shield option available Full

operational use

Provides protection from Level II to Level IIIA in NIJ 0101.04 and NIJ 0101.06 standards. Production in different size sizes.

NIJ 0115.01 Level I blade protection can be provided.

Cordura texturized nylon finish (BS 2861)

Badge attachments (option to remove if not required) Tailored fit waist and shoulder adjustments

Front, rear and side internal soft armour protection against heavy handguns and knives Stab – In house tested protection against most common knife attacks

Fragmentation and explosion protection (NATO STANAG 2920 standard) to 500-550m/s Easy to remove internal panels for cleaning and replacing covers

Advanced sweat control ventilation lining

Military Tactical Ballistic Vest

Shoulder / height fully adjustable

The outer vest fabric is made of hard and heavy-duty fabric.

Can be produced in different color or camouflage patterns according to user's request. These vests provide additional protection with additional ballistic protective plates.

Different sizes and sizes can be produced according to the wishes of the users. CAS Trauma shield available

Available in various protection levels, Vests can provide level IIIA with NIJ 0101.04 and NIJ 0101.06 without additional protective plates, and up to Level IV with additional pads.

Cordura texturized nylon finish

Badge attachments (option to remove if not required)

Tailored fit waist and shoulder adjustments

Front and rear badges

Side Hard Armour Plate pouches and plates Ammunition and storage pouches

BALLISTIC PROTECTIVE VEST

Ballistic hard plate products are manufactured as stand alone and ICW. Stand Alone provides the desired level of protection on its own. ICW can provide the desired level of protection if used together with the soft ballistic panel located behind it.

If a standalone product is preferred in the selection to be made, it should not be considered that there is no need for a soft panel. The soft panel provides high protection against damage on a wide surface.

The rigid ballistic plate protects vital organs with an area of 250x300 cm. The surface area is small compared to the soft ballistic panel.

BALLISTIC PROTECTIVE VEST FEATURE

- High protection against high shrapnel velocity
- **Neck protection**
- Shoulder protection
- **Crotch protection**
- Rigid ballistic plate carrier
- **Soft ballistic panel carrier**
- Quick release system
- **Pockets and accessories**
- Production of vests of any size according to the customer's request, application of the desired camouflage type and pattern
- **Way stretch resistant fabrics for hard armor plate pockets**
- Lighter, less bulky laser cut vests
- **Innovative Quick Release systems**
- Padded plate supports with memory foam
- **Weight distribution systems**
- Hydration compatible systems
- **Removable D rings for gun slings**
- Removable collar, throat, groin and bicep protection parts

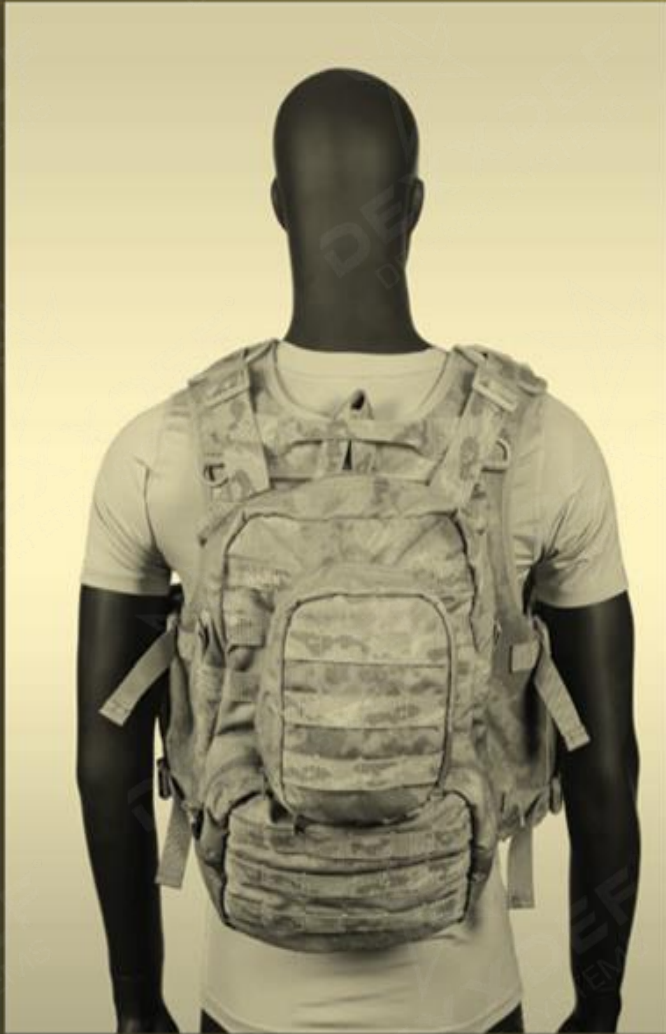

On rigid ballistic plates, make sure that the sponge area that is turned around in accordance with its purpose is not included in the full protection surface area.

BALLISTIC PROTECTIVE VESTS

Ballistic protective vests are designed according to the customer. Before providing customers, ballistics protective solutions are tested and verified by accredited a testing laboratory for specific threats listed in the protection levels of the international standard. All lightweight, ergonomic and top-quality ballistic protective vests of the company are available with October ballistic protective attachments for body parts such as groin, shoulder, upper arm, leg, throat, waist and neck. and equipped with integrated front, back and side license plate pockets.

BALLISTIC PROTECTIVE VEST

BALLISTIC PROTECTION SYSTEMS
DEXXDEF manufactures ballistic vests and plates. The ballistic vest has different colors and patterns depending on different requirements. The protection levels of ballistic plates are NIJ 0101.06 Level III and NIJ 0101.06 Level IV.

Ballistic protective vest is made of ballistic material. The ballistic protective vest provides protection against long- and short-barreled weapons.

HELMETS

DISCOVER OUR TOP PROTECTION PRODUCTS

DEXXDEF offers ballistic helmets for the armed forces, which provide complete head protection with focus on reduction of weight of the equipment, thereby improving mobility.

BALLISTIC PROTECTIVE HELMETS

The accessories developed according to the needs of customers by considering helmets as a platform have been introduced for variable field conditions. These are ballistic protective side armour plates that provide protection against 9 mm projectiles, ballistic protective mandibles, 9 mm visors and fragment visors. In addition to these, additional armour plates (add-on plate), which are attached on to helmets by Velcro tapes and providing protection against rifle bullets, are also produced. Other than these ballistic protective accessories; IR Lights, IR beacons, counterweights, IR patches, fabric helmet covers and NVG mounts are also offered to help customers to operate more effectively and easily in the field conditions.

BALLISTIC COMPOSITE HELMET

Combat helmets provide a high level of ballistic protection and comfort. Excellent ballistic properties against pistol ammunition and parts cause very low blunt trauma. Integrated retention in combination with its ergonomic design, the suspension system proves to be comfortable even after long periods of use. The advanced Combat Helmet design provides improved situational awareness and better field of view. The weight can drop below 1 kg, while the V50 value is above 750 m / s. additional plates are available for protection against 7.62 mm rifle ammunition.

BUMP HELMET

Made of a special polycarbonate material, it is an extremely lightweight product with no ballistic protection, but provides superior protection against impacts. It protects the operation personnel of search and rescue teams, military vehicle personnel, and people doing outdoor sports against impacts. The accessory carriage rails and the shroud serve as a platform for many accessories such as lights, NVGs, cameras and so on. As the accessory carriage rails and shroud are the same of those used on the ballistic protective helmets our bump helmets can be used for training purposes for ballistic protective helmet users.

BALLISTIC PROTECTIVE HELMETS

Ballistic protective helmets are produced in many different styles and from 3 to 4 different sizes per style. All helmets are manufactured according to NIJ and STANAG standards and are tested in the company's accredited in-house ballistic testing laboratory. With an ultra-light helmet weighing only 1 kg and the highest quality in the world, field-tested retention and lining systems are offered to customers and various accessories that are needed are being developed. Daily production capacity 1200pcs ballistic protective helmets.

DXDF31P Head Mounted Night Vision Binocular

Product Description:

DXDF31P is a high-performance military head-mounted night vision upgraded by DEXXDEF based on DXDF31P has a super large field of view, long exit pupil distance, large eyepiece design, high definition, no distortion, light weight, and can be matched with accessories such as gas masks and combat glasses. It is an ideal equipment for military night vision equipment.

DXDF22N FUSION (thermal+night vision)

Product description :

DXDF22N is a foldable night vision device developed exclusively by **DEXXDEF**. It's a balanced center of gravity design, a short wheelbase, and is comfortable to wear. It is not easy to get tired even after long-time use. It is the smallest dual night vision only **395g**. **DXDF22N** has three versions: **night vision** , **information input** , and **thermal fusion** . The thermal fusion not only observe the surrounding environment in a dark environment, but also quickly identify living targets, greatly improving the night recognition ability.

DXDF921N FUSION (thermal +night vision)

Product description :

DXDF921N is a new product developed based on the latest DEXXDEF technology. Small size, light weight, clear imaging, adjustable eye distance, and changeable magnification by replacing the objective lens (or connecting A focal lens). After **adding the thermal imaging mode.**,The thermal fusion **not only observe** the surrounding environment in a dark environment, **but also quickly** identify living targets, greatly improving the night recognition ability.It has built-in IR, and automatic bright source protective. This product is **highly practical** and has a wide range of applications.

DXDF821 Night vision monoculars

Product description:

DXDF821 is a new product developed based on the DEXXDEF technology. It has excellent performance, small size, light weight, clear imaging and simple operation. The magnification can be changed by replacing the objective lens (or A focal lens). The product is connected to a **dual brige** and can also be disassembled to be used as **two monocular devices**. t has built-in IR, and automatic bright source protective. This product is highly practical and has a wide range of applications.

BALLISTIC PROTECTIVE PLATES

At DEXXDEF as threats continue to change and evolve, we work tirelessly to keep your protective gear one step ahead.

HARD BALLISTIC PLATES

Ballistic Protective Plate Level III

Protection : Level III Stand

Made of ultra-light 100% polyethylene.

Each plate contains a high-pressure polyethylene layer

High speed bullet protection provides protection against NIJ Level III and III + defined rifle bullets, either alone or with soft ballistics.

Level III 1.35 kg multi-shot plate NIJ 0101.06

Model : DEXXDEF-III

Orthopedic, multi-slope or single-sloping design plates.

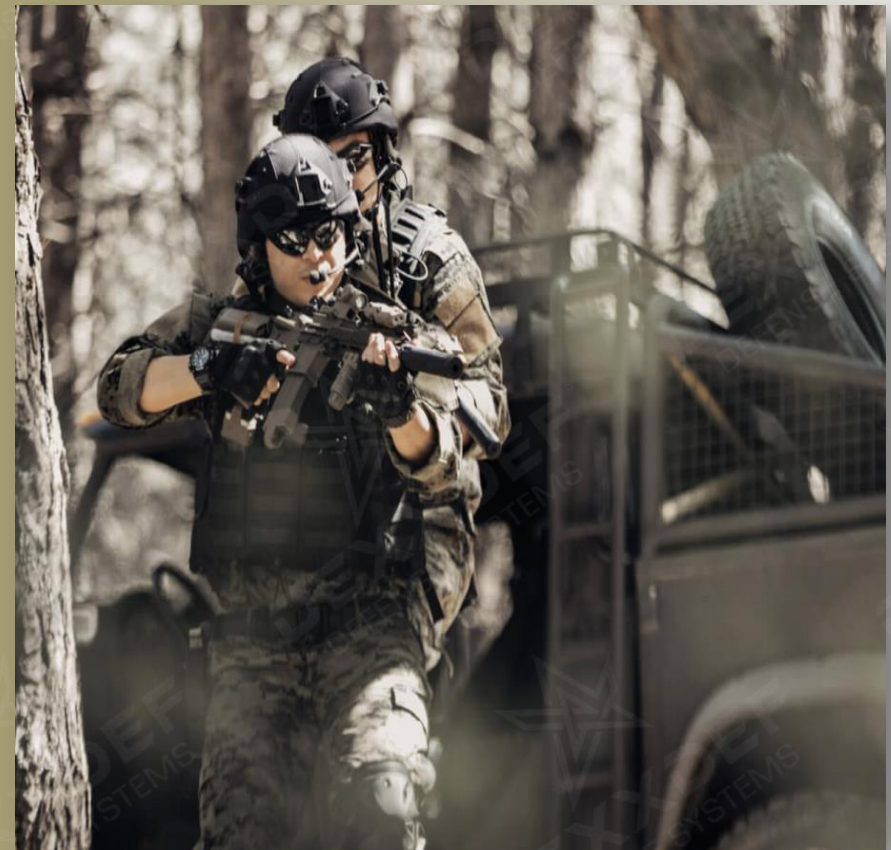

This fully curved 250 mm x 300 mm polyethylene upgrade plate provides NIJ Level III protection in conjunction with our Level IIIA soft armour.

Typically, these weigh 1.2 – 1.6 Kg each depending on individual specification.

The following sizes are currently available:

250 mm x 300 mm Single and multi-curved

200 mm x 250 mm Single curve

BALLISTIC PROTECTIVE PLATE LEVEL IV

Protection : Level IV Stand

This plate is designed to achieve NIJ Level IV protection OUTSIDE

Material made from Silicon metallurgical carbide

High density polyethylene and special process

Serial No: 20220401-1

Model : DEXXDEF-IV

Protection Part: Front Protection / Rear Protection

FROM HIGH-SPEED PROJECTILES EXTRA PROTECTION

Ballistic protective plates, It was developed to protect against the threat of highspeed ammunition.

Rigid guard plates, while providing maximum protection coverage, it provides the possibility of mobility when possible.

The protection level detail is above it was produced according to the given test method

Level IV NIJ0101.06

Ammunition 7,62x54 FMJ - 5,56 NATO - 7,62x39 MSC - 7,62x51 NATO M80

Number of Beats 6

Depression Value 2 mm maximum

Dimensions 300x250 mm

Size Standard

Country of Manufacture Turkey

Soft Ballistic Plates

UHMWPE and aramid supported panels are produced. High-speed and energy-saving bullet protection – Level III A Solutions are produced in desired weight. Production in various sizes. Panel production is performed according to NIJ 0101.04 and 06. From 4 kg / mt² up to 6.5 kg / mt² each protection solutions are produced according to budget and budget.

MILITARY CAMOUFLAGES

Military vest and backpack fabrics require camouflage printing, high tenacity and performance against abrasion and tension. For this reason, we produce vest fabrics by using ultra durable and high strength yarns.

Durability & Other Features

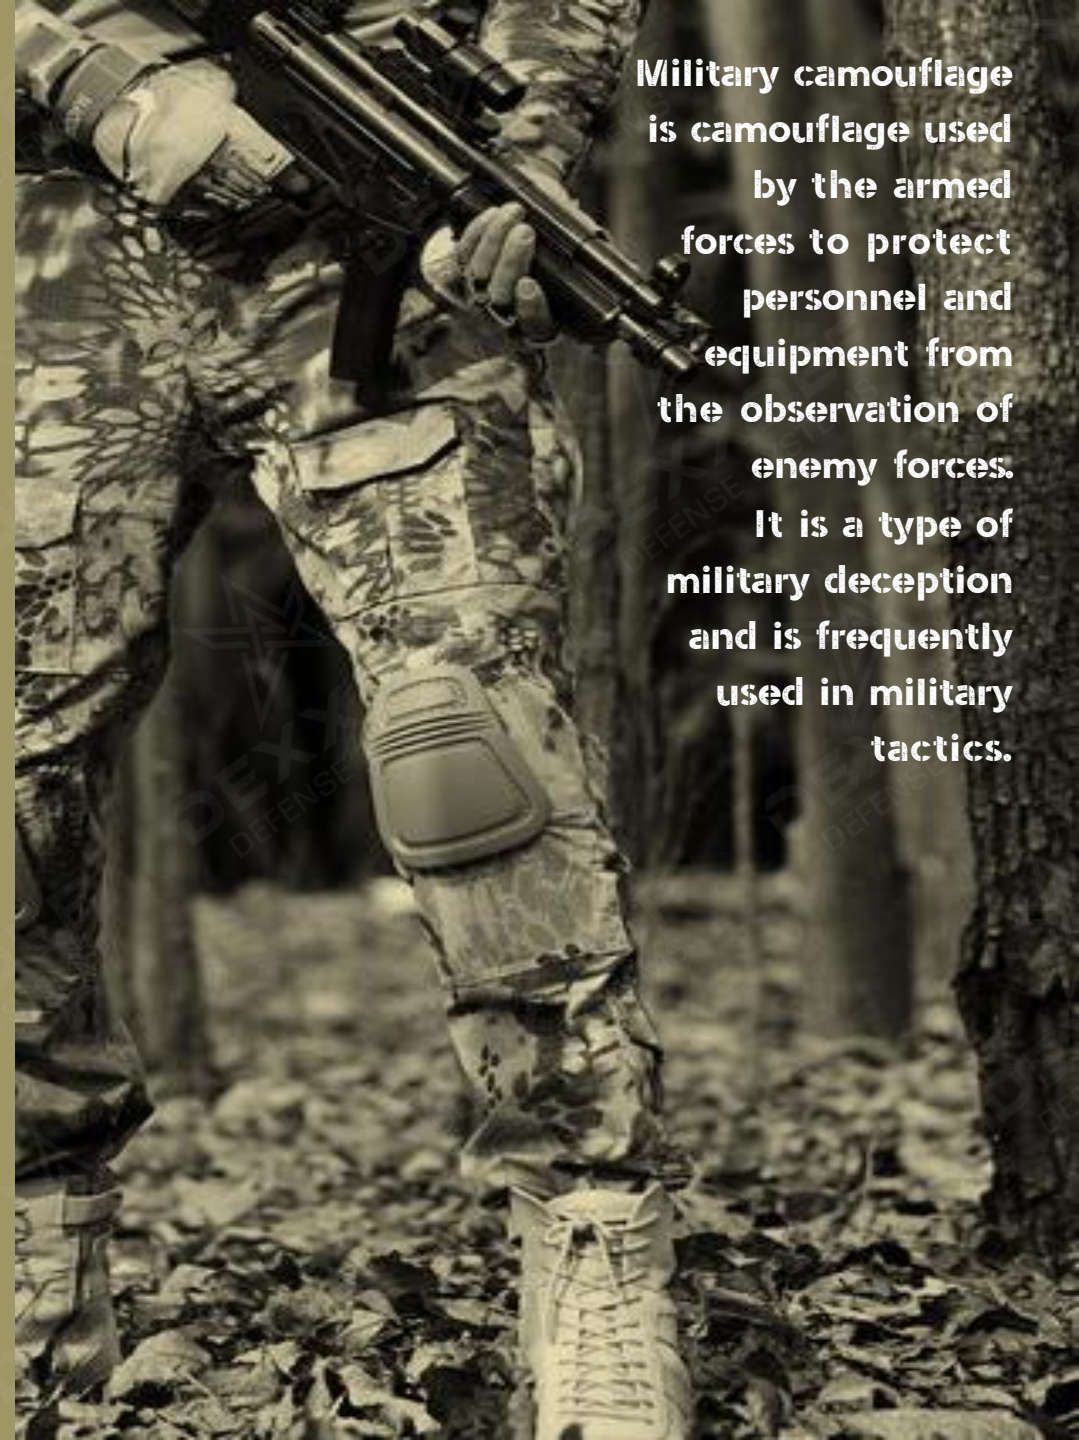

Our military vest and backpack fabrics are made from high tenacity polyester yarns and PA yarns. These fabrics can be used securely in the most difficult fields and situations. We use the most preferred yarns such as 600 D polyester, 900 D polyester, 500 D and 1000 D PA 6.6 in our fabrics.

Considering outdoor use, we apply PU coating to make the fabrics waterproof, special surface treatment to make the fabrics water repellent.

Camouflage printed and waterproof vest & backpack fabrics are designed to be resistant to weather conditions. Flame retardant (F / R) treatment can also be applied to fabrics upon request.

Usage

High density, waterproof, coated polyester and Nylon 6.6 canvas fabrics are used in the production of military vest and backpacks. They are used to cover bulletproof military vest and carry ammunition and supplies in backpacks.

Military camouflage is camouflage used by the armed forces to protect personnel and equipment from the observation of enemy forces. It is a type of military deception and is frequently used in military tactics.

Corrosion Control Cover (CORPROSUN)

Corrosion Control Cover provides protection for vehicles, weapons, guns and other metal devices/materials that are directly exposed to the corrosive effect in mobile position or in the warehouse.

Applications

- ✓ Land, Air and Sea Vehicles
- ✓ Weapon Systems
- ✓ Electronic Systems
- ✓ Industrial Systems / Special Equipment
- ✓ Other various Indoor and Outdoor Applications
- ✓ Stored materials

Features

- ✓ Anti static
- ✓ UV protection
- ✓ Waterproof
- ✓ Breathable
- ✓ Oil and dirt repellent
- ✓ Easy to clean
- ✓ High tensile and tear strength

DUMMY TARGETS

Dummy targets used for training and tactical deception are land/sea/air platforms, Command Control Centers and military facilities, which are inflatable structures designed and produced in real sizes.

- **Material** : Flammable and UV protected PVC
- **Color** : Any desired color
- **Inflate and deflate** : Air pump with pressure sensor

Features

- ✓ In real product dimensions
- ✓ Structural stability for at least four days without re-inflate
- ✓ Easy and fast setup/assembly
- ✓ Thermal trace (optional)
- ✓ Radar track (optional)
- ✓ Capability of movement with an unmanned land platform (optional)

INFLATABLE DUMMY TANK This dummy tank is used to protect real weapons and materials by deceiving the enemy on the battlefield. It can be easily deployed and can be used as a fake target in shooting training.

- Dirsek pedleri için yan cepler

MILITARY BOTS

Soldier boots are known to be manufactured from a durable, durable, waterproof and non-slip sole, unlike other boots. They should be manufactured with the highest quality and most durable materials for the protection of foot health. The most important point to be considered is that the materials used have a feature that does not harm foot health. Products should be produced from non-slip soles in accordance with the effects of seasons and weather conditions. All shoes and boots produced Military Textile are produced with care for color and camouflage patterns in addition to these issues.

MILITARY CLOTHING

ALL SEASON BOOTS

All season boots provide maximum comfort to the feet. It is equipped with the new generation DryTex technology that is waterproof and

breathable. Cordura textile material used are resistant to wear and tear with their water-repelling nature. Non-slip Rubber/PU injected sole with maximum durability is used. With the new shoelace locking system, loosening of laces is prevented and foot is thoroughly by shoe. Comfort of feet is maximised with the orthopedic Orthoflex inner sole technology.

COLD CLIMATE OPERATION BOOTS

Designed for the most challenging field conditions, boots provide high mobility and protect the feet from external factors. They are equipped with the new generation waterproof, breathable OUTDRY technology and with SWELOFT lining material, which protects against cold down to -38 0C. Leather and Cordura textile material used are resistant to wear and tear with their water-repelling nature. Boots have maximum durable, non-slip Rubber/PU injected soles with pattern that ensures traction. Special leather material, which is resistant to scoring and tear, is used on the toecap and heel counter. With new shoelace locking system, foot is thoroughly gripped.

DEXDEF is an export company Military / Police / Security in Turkey has an annual production capacity of 5 million pairs and is a manufacturer of technical shoes. A variety of shoes have been produced according to different terrain and climatic conditions, especially for the Armed Forces, Security Units and Fire Departments around the world. The company's products in this field include products that provide superior mobility, balance and comfort, such as cold climate boots, high responsibility combat boots, light patrol boots, as well as various products for different Decembers and daily use.

CAMP EQUIPMENT SLEEPING BAGS

In this area there are sleeping bags with Dec level of protection from -5°C to -40°C , blankets and mosquito nets in mummy-type versions. For insulation, a special fiber filler is used, which makes it lighter and easier to transport. Thanks to the use of high-quality raw materials, the products have a long service life and are durable. In addition, it produces camping using metal or aluminum. October 19, 2014. Mattresses are made of cotton or synthetic fabric. Single and double bed versions are available. They are delivered with a carrying case.

MEDICALL IFAK

Technical Specifications

Medicall IFAK (Individual First Aid Kit) kits are generally designed to carry, store and protect the materials necessary for personnel to respond to injuries that occur in field operations. For this reason, the bags are manufactured to be small, handy and resistant to field conditions in accordance with their usage areas and purposes. The fabric properties, dimensions and functions of the bags can be redesigned according to customer demands.

Medicall IFAK's Technical Specifications:

- 500 Dtex Coyote Cordura Fabric
- 180° Opening Feature
- Universal MOLLE System (For hanging on your gear or vests)
- Name Tape Strip on the front
- Internal pockets in functional cordura fabric
